Professional Experience

Booz Allen Hamilton **September 2021 - Present**
Lead Engineer

- Leads the development of client-facing React applications, integrating Redux (redux-bundler) or React Query and Zustand for state management and deploying full-stack features with Node.js, Express, and PostgreSQL/Oracle SQL.
- Pushes containerized applications using Docker to AWS ECR, triggering deploys to ECS.
- Oversees the modernization of application designs and functionality, focusing on data input and output and visualizations with libraries like Plotly and Chart.js.
- Develops and integrates dynamic maps in React applications using OpenLayers, Mapbox, and MapLibre, enabling feature-rich geographic visualizations such as vector layers, interactive overlays, and custom controls.
- Reviews pull requests via testing and recommending best practices.
- Manages project tasks and client interactions, taking on PM responsibilities to ensure smooth project delivery and regular reporting.
- Submits deliverable packets highlighting major updates to application for contract.
- Promoted from Staff Engineer to Lead Engineer within 10 months due to outstanding performance.

Mean Guppy **June 2019 – August 2021**
Lead Developer

- Developed and maintained reusable, scalable, and accessible web and mobile components for the Verizon Design System and an internal design system using React and React Native
- Collaborated with clients and designers via Asana and Figma, adhering to best practices and maintaining a high standard of UI/UX.
- Worked with project managers to delegate tasks across development team.
- Published and deployed components as packages using Lerna.
- Tested components under high accessibility standards, using JAWS and VoiceOver
- Verified cross-browser functionality using BrowserStack.
- Built web pages in Verizon Design System documentation site connected to Strapi CMS.
- Reviewed pull requests to maintain high quality of code.

Technical Skills

Languages: JavaScript, HTML, CSS, SQL, Python
Frameworks/Libraries: React, Node.js, Express
Database Management: PostgreSQL, Oracle SQL Developer
DevOps/Cloud: AWS (S3, CloudFront, EC2, ECR, ECS), Docker
Project Management: Jira, Asana, Teams, Slack
Tools: Git, AWS (CLI, SDK)

Education

University at Buffalo, The State University of New York
Computational Physics B.S.
Mathematics Minor

Freelance Experience

Fantasy Football League Summary App **2023 - Present**

- Full-stack application using React, Node, Express, and PostgreSQL to display Sleeper Fantasy Football league data.
- Visualizes current fantasy football scoring, allowing users to compare player performance across teams in their league, using SCSS for styling.
- Demonstrates team performance over the course of the year and in custom week selection.
- User ability to build mock drafts for upcoming drafts, using Redux Toolkit Query for mutations and queries.
- Scrapes fantasy football player rankings using Python.
- Deployed with AWS S3, Route 53, Cloudfront, and EC2.

Finta Web and Mobile Application **2019-2023**

- Developed features on Finta React application with Firebase database, including investor networks and ChatGPT personalized email generations.
- Built an iOS application with React Native that allows users of the Finta web app to access key information, now available on the Apple App Store.

Care Center Stage **2021**

- Collaborated with designer and developer in small team to create new pages and components in social media website using React based on Adobe XD designs.
- Connected pages and components with Redux, Express and Mongo.

Portfolio Website **2020**

- React application displaying my professional and academic experience deployed with AWS S3, Cloudfront and Route 53
